

Setting Your Sprinkler Timer Procedure

General Information

Each home has a manual control switch and a timer that controls the water coming from the Oakmont Village pump.

The homes have several sections for watering. Most have three (3) sections but some of the larger lots have four (4). A sequencing valve is at the inlet to the sprinkler system that advances the water to the next section each time the valve is energized. Sprinkling three (3) days per week is sufficient to supply five (5) inches of water per week!

Procedure

- 1) Move the **Manual Control Switch** to the center, **Off** position.
- 2) Rotate the large yellow wheel, **Set Present Time**, counter-clockwise until the pointer is pointing at the present correct time. Please note there is an AM and a PM section.
- 3) Using the list at the end of this document, "Oakmont Village Timer Settings", find your address and the corresponding days to sprinkle. With a tweezers, long nose pliers or your fingernails, place the U-shaped pins labeled **Time to Sprinkle** above, in the slots that correspond to the time shown in the Start Time column. Note that there are AM and PM locations and be sure the pins are all the way in the slots.

- a) Then leave one slot blank. Place two (2) more pins in the next two slots. Most homes have three (3) sections but there are a few that have four (4). Insert the appropriate number of pins for your home.
- 4) The **Days to Sprinkle** is located in the lower right corner of the timer and is a black wheel with shiny, non-removable, metallic pins. Push all of them in.
 - a) Using the list at the end of this document, "Oakmont Village Timer Settings", find your address and the corresponding days to sprinkle. Gently pull the pins toward you (out) that correspond to your sprinkling days. Note: there are two (2) sets of days on the wheel. Pull out both sets of pins.
 - b) Rotate the black wheel in which the pins are mounted so the pointer is pointing to the **Present Day of the Week** in which you are setting the timer. That is if you are setting the timer on a Monday, rotate the wheel so the pointer is pointing at Monday.
- 5) Move the **Manual Control Switch** up to the **AUTO** position and close the timer door. You're ready to go. Your sprinkler will turn on at night, probably when you're asleep. You can verify the sprinkler is working by placing a bowl near one of the sprinklers and checking it for water in the morning.

Thank you for your help and cooperation. I hope this procedure makes setting your sprinkler timer a lot easier.

Address	Start Time	Days
